Managed Hosting

Alliant Managed Services (AMS) provides a comprehensive suite of IT solutions that maintain client operations with maximum efficiency and minimum downtime. Each of our solutions is customized to client specifications, powered by best-in-breed technologies, and is supported by our 24x7 Service Desk of certified Level 1 – Level 3 engineers. AMS delivers IT as a finished product, allowing our clients to focus on their core business with the peace of mind that their critical business support functions are installed, operated, and maintained at the highest level using state-of-the-art tools and expertise.

Managed Two-Factor Authentication Service

Alliant Technologies' Managed Two-Factor Authentication (2FA) Service allows clients to outsource the management and administration of RSA authentication with SecurID tokens. Whether you are new to two-factor authentication, or a seasoned user of SecurID tokens, AMS has a service option that will increase your security posture while improving platform availability and end-user satisfaction levels while containing cost.

Managed 2FA Service is available in two options:

Hosted Service: If you are new to two-factor authentication, the easiest way to implement a SecurID solution is to call on our hosted service. Our Service Delivery team will set up a custom web portal for token requests, build an RSA Authentication Manager Server (and back-up) at our Network Operations Center, process new token orders, administer the SecurID application, and support end user requests. You will achieve stronger security protection without a heavy impact on your IT department workload or data center footprint, without the capital investment normally associated with this solution.

Remote Service: RSA is the number one supplier of two-factor authentication - SecurID tokens are in use at 85% of the Fortune 500 companies. So, if you already have SecurID deployed, our technicians can take over the management and administration of your existing application, start fulfilling new token orders, and support your end users 24x7. AMS can also offer complimentary hosting of an RSA Authentication Manager replica at our Operations Center for redundancy and Disaster Recovery purposes. AMS 2FA Service off-loads day-to-day SecurID management activities and improves overall system reliability.

Key Features

- Simple web interface to request RSA SecurID tokens
- Fulfillment of end user token orders, domestically and internationally
- 24/7 End User Service Desk to support token-related end-user inquiries
- Token inventory reports for IT audits or internal bill-back
- Fully managed and secure RSA application servers hosted at the AMS Network Operations Center
